

TO: All LAVA members using filters with during bottling (Please save this email for further reference)

**Subject:** LAVA filters

The LAVA club has two filter housing, and 10 - 1/2 micron FDA food/beverage, gradient blown poly filters, (a.k.a. sterile filters, i.e. bacteria)...

Don Norman says: You can let the club know we have two filter housings (Pentek),

1/2 micron (Bacteria cells - sterile) filter,

1 micron (all yeast cells) filter, and

3 micron (sediment) disposable filters.

All work in-line with the two enol-matic single spout fillers.

Please schedule the use of this equipment via email with Don Norman at [donald.norman@sbcglobal.net](mailto:donald.norman@sbcglobal.net)
